**MISP**  
**Threat Sharing**

# WHY WE WANT TO GO MORE MODULAR...

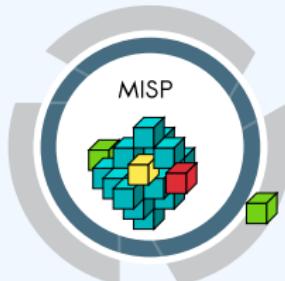

## ■ Ways to extend MISP before modules

- ▶ APIs (PyMISP, MISP API)
  - Works really well
  - **No integration with the UI**
- ▶ Change the core code
  - Have to change the core of MISP, diverge from upstream
  - Needs a deep understanding of MISP internals
  - Let's not beat around the bush: **Everyone hates PHP**

# GOALS FOR THE MODULE SYSTEM

- Have a way to extend MISP without altering the core
- Get started **quickly** without a need to study the internals
- Make the **modules as light weight as possible**
  - ▶ Module developers should only have to worry about the data transformation
  - ▶ Modules should have a simple and clean skeleton
- In a friendlier language - **Python**

# MISP MODULES - EXTENDING MISP WITH PYTHON SCRIPTS

- MISP expansion modules
  - IP address expansion
  - VirusTotal
  - VIPER modules
  - Your module

- Extending MISP with expansion modules with zero customization in MISP.
- A simple ReST API between the modules and MISP allowing auto-discovery of new modules with their features.
- Benefit from existing Python modules in Viper or any other tools.
- MISP modules functionnality introduced in MISP 2.4.28.
- MISP import/export modules introduced in MISP 2.4.50.

# MISP MODULES - INSTALLATION

- MISP modules can be run on the same system or on a remote server.
- Python 3 is required to run MISP modules.
  - ▶ sudo apt-get install python3-dev python3-pip libpq5
  - ▶ cd /usr/local/src/
  - ▶ sudo git clone https://github.com/MISP/misp-modules.git
  - ▶ cd misp-modules
  - ▶ sudo pip3 install -I -r REQUIREMENTS
  - ▶ sudo pip3 install -I .
  - ▶ sudo vi /etc/rc.local, add this line: 'sudo -u www-data misp-modules -s &'

# MISP MODULES - SIMPLE REST API MECHANISM

- <http://127.0.0.1:6666/modules> - introspection interface to get **all modules available**
  - ▶ returns a JSON with a description of each module
- <http://127.0.0.1:6666/query> - interface to **query a specific module**
  - ▶ to send a JSON to query the module
- MISP **autodiscovers** the available modules and the MISP site administrator can enable modules as they wish.
- If a configuration is required for a module, **MISP adds automatically the option** in the server settings.

# FINDING AVAILABLE MISP MODULES

■ curl -s http://127.0.0.1:6666/modules | jq .

```
1      {
2          "type": "expansion",
3          "name": "dns",
4          "meta": {
5              "module-type": [
6                  "expansion",
7                  "hover"
8              ],
9              "description": "Simple DNS expansion service
10                 to resolve IP address from MISP
11                 attributes",
12              "author": "Alexandre Dulaunoy",
13              "version": "0.1"
14          },
15          "mispattributes": {
16              "output": [
17                  "ip-src",
18                  "ip-dst"
19              ],
20              "input": [
21                  "hostname",
22                  "domain"
23              ]
24          }
25      }
```

# MISP MODULES - CONFIGURATION IN THE UI

## Server settings

Overview MISP settings (18) GnuPG settings (3) Proxy settings (5) Security settings (2) Misc settings (1) Plugin settings (22)				Diagnostics	Workers	
Enrichment						
Priority	Setting	Value	Description			
Critical	Plugin.Enrichment_services_enable	true	Enable/disable the enrichment module			
Recommended	Plugin.Enrichment_services_url	http://127.0.0.1	The url used to access the enrichment services			
Recommended	Plugin.Enrichment_services_port	6666	The port used to access the enrichment services			
Recommended	Plugin.Enrichment_cve_enabled	false	Enable or disable the cve module			
Recommended	Plugin.Enrichment_dns_enabled	true	Enable or disable the dns module			
Recommended	Plugin.Enrichment_sourcecache_enabled	false	Enable or disable the sourcecache module			
Recommended	Plugin.Enrichment_sourcecache_archivepath		Set this required module specific path			
Recommended	Plugin.Enrichment_passivetotal_enabled	true	Enable or disable the passivetotal module			
Recommended	Plugin.Enrichment_passivetotal_username	alexandre.dulaunoy@circl.lu	Set this required module specific username			
Recommended	Plugin.Enrichment_passivetotal_password		Set this required module specific password			

# MISP MODULES - HOW IT'S INTEGRATED IN THE UI?

Filters: All File Network Financial Proposal Correlation				
Value	Comment	Related Events	ID \$	Distribution
microsoft.com			No	Inherit
google.com	25		No	Inherit
circl.lu			No	Inherit

Modules → Discussion

Choose the enrichment module that you wish to use for the expansion

dns

3	Network activity	domain	google.com	25
3	Network activity	domain	circl.lu	

## Enrichment Results

Below you can see the attributes that are to be created. Make sure that the categories and the types are correct, often several options will be offered based on an inconclusive automatic resolution.

Value	Category	Type	ID \$	Comment	Actions
23.100.122.175	Network activity	ip-src		Imported via the freetext import.	x

Submit

ip-src → ip-dst Change all

Update all comment fields Change all

# MISP MODULES - MAIN TYPES OF MODULES

- Expansion modules - enrich data that is in MISP
  - ▶ Hover type - showing the expanded values directly on the attributes
  - ▶ Expansion type - showing and adding the expanded values via a proposal form
- Import modules - import new data into MISP
- Export modules - export existing data from MISP

# QUERYING A MODULE

- curl -s http://127.0.0.1:6666/query -H "Content-Type: application/json" -data @body.json -X POST

body.json

---

```
1 {"module": "dns", "hostname": "www.circl.lu"}
```

---

- and the response of the dns module:

---

```
1 {"results": [{"values": ["149.13.33.14"],  
2 "types": ["ip-src", "ip-dst"]}]}
```

---

# CREATING YOUR MODULE - DNS MODULE

```
import json
import dns.resolver
misperrors = {'error': 'Error'}
mispattributes = {'input': ['hostname', 'domain', 'domain|ip'], 'output': ['ip-src','ip-dst']}
moduleinfo = {'version': '0.3', 'author': 'Alexandre Dulaunoy', 'description': 'Simple DNS expansion service to resolve IP address from MISP attributes', 'module-type': ['expansion', 'hover']}
moduleconfig = ['nameserver']

def handler(q=False):
    if q is False:
        return False
    request = json.loads(q)
    if request.get('hostname'):
        toquery = request['hostname']
    elif request.get('domain'):
        toquery = request['domain']
    elif request.get('domain|ip'):
        toquery = request['domain|ip'].split('|')[0]
    else:
        return False
    r = dns.resolver.Resolver()
    r.timeout = 2
    r.lifetime = 2

    if request.get('config'):
        if request['config'].get('nameserver'):
            nameservers = []
            nameservers.append(request['config'].get('nameserver'))
            r.nameservers = nameservers
        else:
            r.nameservers = ['8.8.8.8']

    try:
        answer = r.resolve(tquery, 'A')
    except dns.resolver.NXDOMAIN:
        misperrors['error'] = "NXDOMAIN"
        return misperrors
    except ...
        pass

    return {'results': [{}{'types': mispattributes['output'], 'values':str(answer[0])}]}

def introspection():
    return mispattributes

def version():
    moduleinfo['config'] = moduleconfig
    return moduleinfo
```

# TESTING YOUR MODULE

- Copy your module dns.py in modules/expansion/
- Restart the server misp-modules.py

```
[adulau:~/git/misp-modules/bin]$ python3 misp-modules.py
2016-03-20 19:25:43,748 - misp-modules - INFO - MISP modules passivetotal imported
2016-03-20 19:25:43,787 - misp-modules - INFO - MISP modules sourcecache imported
2016-03-20 19:25:43,789 - misp-modules - INFO - MISP modules cve imported
2016-03-20 19:25:43,790 - misp-modules - INFO - MISP modules dns imported
2016-03-20 19:25:43,797 - misp-modules - INFO - MISP modules server started on TCP port 6666
```

- Check if your module is present in the introspection
- curl -s http://127.0.0.1:6666/modules
- If yes, test it directly with MISP or via curl

# CODE SAMPLES (CONFIGURATION)

```
# Configuration at the top
moduleconfig = ['username', 'password']

# Code block in the handler
if not request.get('config'):
    return {'error': 'CIRCL Passive SSL authentication is missing.'}

if not request['config'].get('username') or not request['config'].get('password'):
    return {'error': 'CIRCL Passive SSL authentication is incomplete, please provide your username and password.'}
authentication = (request['config']['username'], request['config']['password'])

if not request.get('attribute') or not check_input_attribute(request['attribute']):
    return {'error': f'{standard_error_message}, which should contain at least a type, a value and an uuid.'}
attribute = request['attribute']

pssl_parser = PassiveSSLPParser(attribute, authentication)
```

# DEFAULT EXPANSION MODULE SET

- asn history
- CIRCL Passive DNS
- CIRCL Passive SSL
- Country code lookup
- CVE information expansion
- DNS resolver
- DomainTools
- eupi (checking url in phishing database)
- ipasn
- PassiveTotal -  
<http://blog.passivetotal.org/misp-sharing-done-differently>
- sourcecache
- Virustotal
- Whois
- ...

# IMPORT MODULES

- Similar to expansion modules
- Input is a file upload or a text paste
- Output is a list of parsed attributes to be editend and verified by the user
- Some examples
  - ▶ Cuckoo JSON import
  - ▶ email import
  - ▶ OCR module
  - ▶ Open IoC import

## EXPORT MODULES

- Not the preferred way to export data from MISP
- Input is currently only a single event
- Output is a file in the export format served back to the user
- Will be moved / merged with MISP built-in export modules
  - ▶ Allows export of event / attribute collections

# NEW EXPANSION & IMPORT MODULES FORMAT

- Backward compatible - an additional field to extend the format

```
misp_attributes = {'input': [...], 'output': [...],  
                    'format': 'misp_standard'}
```

- Takes a standard MISP attribute as input

- Returns MISP format

- ▶ Attributes
- ▶ Objects (with their references)
- ▶ Tags

```
results = {'Attribute': [...], 'Object': [...],  
           'Tag': [...]}
```

- First modules supporting this new export format

- ▶ urlhaus expansion module
- ▶ Joe Sandbox import & query module

# NEW EXPANSION & IMPORT MODULES VIEW (MISP 2.4.110)

## Enrichment Results

Below you can see the attributes and objects that are to be created from the results of the enrichment module.

## NEW - STANDALONE FUNCTIONALITY

- Flexibility, no need to install MISP
- User friendly interface
- Easiest way to test new modules

# WEB INTERFACE - QUERY

- Add multiple entries
- Choose different modules

The screenshot shows the MISP Query interface. On the left is a sidebar with a navigation menu:

- Home
- History
- History Session
- History Tree
- Config
- External tools

A blue button labeled "Query" is highlighted. The main area is titled "MISP Modules". It displays a search bar with the query "circ.lu", a "Add new entry" button, and a "Delete entry" button. Below this is a section titled "Input Attributes" with a dropdown menu set to "domain". A section titled "Modules" contains a list box with the item "circL\_passivedns". At the bottom is a checkbox labeled "Configure all modules".

# WEB INTERFACE - RESULTS

## ■ Multiple tabs for visualization in different formats

The screenshot shows the MISP web interface with the following details:

- Left Sidebar:** Home, History, History Session, History Tree, Config, External tools.
- Header:** MISP, circl.lu, + New query, Query, Refresh.
- Input Attribute:** domain
- Modules:** cird\_passivedns
- Timeline:** 100% (blue bar), Stopped | 1 Success, 0 Errors, 1 Total, 2024-07-08 13:34.
- Visual:** Selected tab.
- Json:** Available tab.
- Markdown:** Available tab.
- External tools:** circl.lu, Errors, circl.lu.
- Content Area:** Shows the results for the cird\_passivedns module, including fields like rrtype, rname, rdata, count, origin, and time\_first, each with a 'query' link.

# WEB INTERFACE - HISTORY

- Save your researches and pivot from them

The screenshot shows the MISP web interface with the 'History' tab selected in the sidebar. The main area is titled 'History' and contains a message: 'All histories present here will be deleted at the end of the session'. Below this, a history entry is listed under '# 1'. The entry details are as follows:

circ.lu	Input Attributes	Modules	<input type="button" value="Delete"/>
domain		circ_passivedns	

A blue 'Save' button is located to the right of the history entry.

# WEB INTERFACE - EXTERNAL TOOLS (DEV)

## ■ Export results to other tools. (Still in dev)

The screenshot shows the MISP web interface with the following details:

- Left Sidebar:** Home, History, History Session, History Tree, Config, External tools (selected).
- Header:** MISP Threat Hunting
- Page Title:** External tools
- Search Bar:** Search tools
- Tool List:** flowintel (selected, indicated by a checked checkbox and a red circle with an 'x').
- Tool Configuration Panel:**
  - Name:** flowintel
  - Url:** http://localhost:7006/analyzer/receive\_result
  - Buttons:** Save (blue), Delete (red)
- Page Bottom:** [Go Back Top]

## FUTURE OF THE MODULES SYSTEM

- Enrichment on full events
- Move the modules to background processes with a messaging system
- Have a way to skip the results preview
  - ▶ Preview can be very heavy
  - ▶ Difficulty is dealing with uncertain results (without the user having final say)

# Q&A

- <https://github.com/MISP/misp-modules>
- <https://github.com/MISP/>
- We welcome new modules and pull requests.
- MISP modules can be designed as standalone application.
